**Visible Learning:
The Sequel**
John Hattie
Corwin, 2023

This book is an update of “Visible Learning” (2008) defined by “The Times Educational Supplement” as the “Holy Grail of teaching”. In this sequel, John Hattie reveals how “Visible Learning” has been implemented over the years, how it has been understood and misunderstood, as well as the future direction the field of educational research should take. In this edition, Hattie updates his earlier work and highlights the need for teachers to consider assessing the impact of that evidence on student learning in their classrooms.

Making Room for Impact
Arran Hamilton, John Hattie
and Dylan Wiliam
Corwin, 2023

This guide for educators criticises the time constraints and overload that many teachers face. This is giving rise to a type of reorganisation that has been coined “de-implementation” in the book. It involves emptying the “space” of everything that is not a priority and instead filling it with things that are truly worthwhile and have a positive impact on the students. The outcome of the work of the book’s prestigious authors is a four-step process that consists of reducing teaching and replacing it with other highly effective proven practices, in order to get back our lives without harming our students.

Powering Up Your School
Guy Claxton et al.
Crown House Publishing, 2020

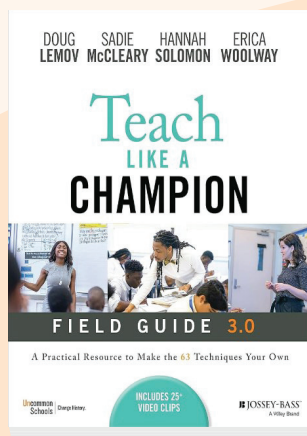

Through a wealth of different tips, this book aims to integrate the Learning Power Approach (LPA) into schools. LPA is a form of teaching that seeks to give students the ability to solve problems on their own as well as collaboratively. The aim of this problem-solving is for students to develop the confidence, creativity and perseverance needed to adequately address the issues facing them. It also promotes strength of character and academic success and outlines how to achieve them.

Viure en digital
Miquel Àngel Prats
Eumo, 2022

In this book, the author discusses the opportunities afforded by technology to bridge the learning gaps caused by disparate socioeconomic situations, without ignoring the threats that also lurk within it. With a large dose of common sense, he offers criteria so we can learn to make good use of these tools and pass on to future generations the proper judgment they will use in their learning, their entertainment and their way of interacting with others.

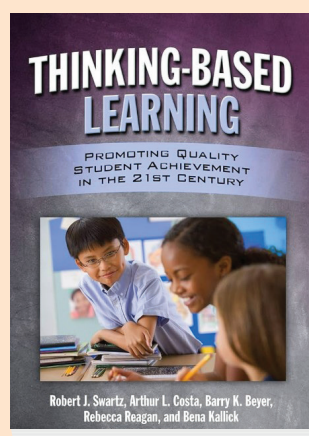

Teach Like a Champion 3.0

Doug Lemov
Learning Bits, 2023

With techniques and practices to implement, this book offers a complete guide to building a healthy environment and a school culture within the classroom permeated by trust, responsibility, respect and excellence, among other precious values. It is a didactic book targeted at teachers who want to improve their experience. At the end of each chapter, they will find activities and methods that will help them to apply these techniques and put them into practice.

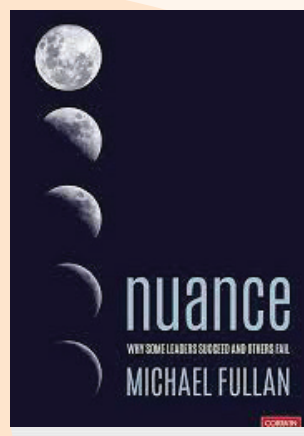

Thinking-Based Learning

Robert Swartz et al.

Ediciones SM, 2014

The book provides teachers with a didactic guide to enable them to apply effective thinking to content. It is full of case studies, providing the reader with a methodology on how to teach students to find evidence to support their conclusions, how to listen carefully to others, how to develop creative thinking and how to communicate clearly and rigorously. The authors of the book conclude that time spent learning radically improves students' intellectual performance.

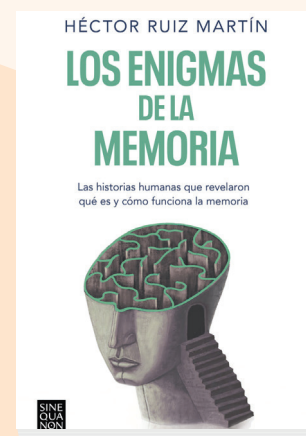

Nuance

Michael Fullan

Ediciones Morata, 2019

By means of a simple question that serves as his thesis, the author develops an entire philosophy about how it is possible for a group of leaders to do the same thing or behave in a similar way and yet get such disparate results, with some succeeding and others failing. The book seems to be the key factor to take into consideration, because nuance is precisely the capacity for discernment that allows us to interpret situations clearly and respond to them appropriately. Thus, Fullan confirms the close connection between proper judgment and learning.

Los enigmas de la memoria

Héctor Ruiz Martín

Ediciones B, 2022

This book is a journey through the many secrets of memory. It takes us on one of the most fascinating scientific adventures in a quest to discover who we are through extraordinary human stories that have revealed the virtues and flaws of our most precious gift: memory. The author teaches us that memory is the ability to learn, and we see how it is developed and organised, what factors influence it and why it fails us so often. This unique journey reminds us that we are all freer thanks to our memories.
